

Research group:

iTec (Interdisciplinary Research on Technology, Education & Communication) is a knowledge center of the K.U.Leuven Campus Kortrijk that unifies researchers from various research units, more specifically researchers from the domains of linguistics, computer sciences, education and statistics. iTec focuses on research in which these disciplines interact intensively. More specifically, fundamental and applied research is done on (the development of) electronic learning environments for language learning. See <http://kuleuven-kortrijk.be/itec/> for more information.

Job description:

As part of an interdisciplinary team, including about 20 junior researchers, the research assistant will be engaged for analyzing large existing data sets, consisting of data that are logged when persons use an electronic learning environment (including responses to exercises, response times, various background variables, ...). In addition, the research assistant will help in setting up studies to evaluate the effect of adaptations to learning environments.

Requirements:

Master in statistics or

Master in the social and behavioral sciences with a strong background in data-analysis and methodology

Period:

15 april 2010-14 april 2011 (possibly extended)

Information and applications (CV and motivation letter): Wim.VandenNoortgate@kuleuven-kortrijk.be
