

(Sr.) Biostatistician

Medtronic Maastricht, the Netherlands.

OUR CHALLENGE

At our Bakken Research Center in Maastricht, about 200 clinical researchers, scientists and technical engineers cooperate closely with medical specialists in and outside of Europe to develop new and improve existing therapies in Cardiac Rhythm Disease Management and Cardiovascular Surgery. Our broad range of clinical services includes international project management, statistical advise, IT support and medical writing, which makes us Medtronic's authority on clinical research outside of the US.

OUR OFFER

As a biostatistician you will be responsible for the statistical aspects of the design and execution of clinical studies in patients with heart disease. You will advise on the methodological correctness and efficiency of the study design, assess the required study size, write the statistical section of the protocol and the analysis plan, perform the analysis, and ensure that well-founded conclusions are drawn. Through active cooperation with physicians and medical researchers you will take a leading role in the publication of study results. Retrieving data from the clinical database and preparing the necessary summary reports is another part of the job. You will be working in a team of statisticians and clinical database specialists.

YOUR PROFILE

- Master's degree in Statistics, Biostatistics, Mathematics or Epidemiology.
- Strong interest in medical science

We are looking for a team player with good communication skills. You have experience with SAS programming, knowledge of databases as well as experience in clinical research and knowledge of ICH/GCP. You work independently with low supervision and you are a self-starter and a generalist with excellent statistical and analytical skills. You are fluent in English, both in writing and speaking.

YOUR CAREER

Medtronic offers you a professional, dynamic and high quality working environment, where personal development is stimulated and personal initiatives are encouraged. Your Individual Development Plan will challenge you to develop your personal skills and competencies, to build your career within our (global) organization.

YOUR ANSWER

Is this the position you were waiting for? Then apply directly via careers.nl@medtronic.com. For more information contact Mijke Hertzberger, +31 43 356 6608.

BE THE DIFFERENCE

Are you looking for a challenge as well as a career? What bigger challenge can there be than making real, tangible improvements in peoples' lives and health? Everyone at Medtronic is committed to doing just that. That's why we have created a company that nurtures talent, encourages individuality and supports innovation. When the best people are allowed to deliver their best, we all benefit – the individual, the company and, most importantly, patients everywhere.
